

## Risk-Free Savings Guarantee

The outstanding energy savings from LEDs can sound “Too Good to Be True”, causing many people to be somewhat skeptical. For this reason, NexGen Energy Group offers its clients a complementary ***Risk-Free Savings Guarantee***.

Here’s how it works: The only way to accurately measure energy savings is to compare the energy consumption **BEFORE** the new lighting is installed, to **AFTER** the installation of LEDs.

So, it’s very simple; our installation crew puts a meter on the circuit (wires) that controls a sample test group lights to record the BEFORE load/energy consumption. Next, after the LEDs are installed they repeat the same exercise to record the new load on the same circuit.

**Comparing the BEFORE to AFTER is accurate to within 3-percent of your projected savings.**

NexGen Energy Group guarantees your energy savings as stated in our lighting proposals will be accurate to within 3-percent.

Our **Risk-Free Savings Guarantee** is available to all clients in advance of their lighting conversion.

Don’t take chances on your savings. Talk to the experts at NexGen Energy Group, today.
